Faros Cardio

Faros Dreamteam

+ 28X

eMotion Faros Advanced Applications are effective tools for monitoring stress, recovery and well-being in general. It allows comprehensive analysis of stress levels by identifying risk factors during work hours as well as during free time on groups, teams and workforce.

- Effective individual monitoring of training activities in cardiopulmonary rehabilitation. Logically and innovatively designed, the system meets the latest standards in exercise and training biosignal science and introduces new multiple mounting solutions (*Patent pending*).

- Get the most out of your training sessions or workforce efficiency. Designed to work with coaching and occupational health, Faros Dreamteam application allows you to gain specific insight into the capabilities of your team or personnel.
- Real-time bluetooth feed offers the possibility of tracking and recording biosignal activity on up to 28 people at once. This is the equivalent to two football teams or the entire staff on a medium size company.

eMotion Faros Advanced Applications help prevent stress related issues at the workplace. These applications enable powerful team performance analysis and effective well-being management. Optimal mental and physical balance is proven to improve productivity and overall enjoyment of the working environment.

Mega Electronics Ltd is a medical technology company specialized in biosignal monitoring for neurology, rehabilitation, occupational health and sports medicine since 1983.
